## Getting Techy: Using the latest technology to create exceptional patient experiences and outcomes

**Mr Dean Phelps**  
*Fighting Fit Physio*

The clinical landscape is beginning to change with the introduction of wearable technology, easy to use software and cloud base storage.

What was once only seen in high performance centres and universities for elite athletes or research, needed a degree in statistics and weeks of analysis to use, is now readily available to everyone, at a fraction of the cost, effort and time.

Our clinical decision making is now at the touch of a button and the swipe of an iPad. It is making our jobs cool as hell and boosting the buy into rehab has never been easier with adopting technology into your clinical practice.

Join me as I show you how you can easily test and measure, monitor and report, justify and deliver to any one of your patients their progress while enhancing a patient's experience in your facility.

We will dive into the practical application of Vald Performance's latest technology with real patients and how it can help you make the right clinical decision at the right time.

This is a talk for the clinician, entrepreneur and/or health care business owner looking to enhance results with their patient, boost their business and transform it into the digital age all at the same time.

The time is now to develop into a high tech health care facility.
